Introduction

Every Preslog cycle will be presented in the following pages on a chronological basis.

The first page of a Preslog presentation consists always of the administration sheet, which is a standard filled up data sheet.

The pages presented afterwards are the graphs of the worked up Preslog data. The first page is always the pressure plot of the whole measuring period.

The two tables on page 2 show again the chronological and number sequences of all 43 Preslog cycles.

The last pages of this Volume II are the detailed calculations of the discharges of wadi Amad in 1989 as annex of chapter 4.

PLACE :Amad 1

PRESLOG:4438-1

Service given before initiation?:
-interval :00:15

Initiation date:23/01/90

Initiation time:13:00

Try-out results: following data was obtained in field at
installation 23/01/90, 13:00 h :
23/01/90 13:00 last marker
,, 13:00 air
,, 13:15 water of 143 cm on sensor
,, 13:30 water of 143 cm on sensor
,, 13:45 water of 143 cm on sensor
14:00 air

the results, when reading out, were the same.

Markers given : one at beginning and one at end

Installation date:23/01/90

Installation time:13:00

Installation description :in pipe
-installation place:middle wadi
-waterlevel :-

Check up visit date :3/90

Check up visit results: the pipe was moved; was under strong
slope and there was no sand around
concrete fouting anymore, pipe was
replaced and sand restored.

Calculated removal/stop date:09/05/90

Calculated removal/stop time:-

Removal date:02/05/90

Removal time:14:05

Remarks : pipe was still vertical whereas there have been a
flood after reconstruction.

PLACE :Amad 2

PRESLOG:4433-3

Service given before initiation?:
-interval :00:15

Initiation date:23/01/90
Initiation time:13:00

Try-out results: following data was obtained in field at installation 23/01/90, 13:00 h :

23/01/90 13:00 last marker

,, 13:00 air

,, 13:15 air

,, 13:30 air

,, 13:45 air

,, 14:00 water of 143 cm on sensor

,, 14:15 water of 143 cm on sensor

,, 14:30 water of 143 cm on sensor

,, 14:45 water of 143 cm on sensor

,, 15:00 water of 143 cm on sensor

15:15 air

the results, when reading out, were different:

-not any increase in pressure can be observed as can be noticed on the listing of the file.

Markers given :one at beginning, none at end

Installation date:23/01/90
Installation time:13:00

Installation description :in pipe
-installation place:middle wadi
-waterlevel :-

Check up visit date :3/90

Check up visit results:OK, vertical

Calculated removal/stop date:09/05/90
Calculated removal/stop time:-

Removal date:03/05/90

Removal time:? (Mohammed S)

Remarks : the pipe was under strong slope, large amount of sediment in pipe, the logger could not be removed 02/05/90 but only 03/05/90 when the pipe was taken out and a new one was installed.

-waterlevel:-

-sediment :as described

Service given :new batteries (plate) and rings

General remarks:

1.only 112 records: 1- 99 were before 14/06/88 10:47
100 was at 14/06/88 10:47
111 was at 14/06/88 13:15 when the Preslog
was already installed in the wadi; did not give any increase in
pressure due to water of drum. Why did he stop at 112 ?
