SANITATION (IRC)

1. BACKGROUND INFORMATION

The existing population of Beira is estimated to be close to 400,000 inhabitants, and with the surrounding suburbs 500,000 people.

The present water supply system was built in the 1950's and 1960's and it now serves the population of Mutua, Mafambisse, Mezimbite, Dondo, Inhawizua, Manga and Central Beira. About 30 per cent of the population benefit from the Beira Water System.

Central Beira has a water-borne sewerage system built in the early 1960's as well as a drainage system. It serves only about 15 per cent of the population. The rest of the inhabitants use septic tanks or pit latrines.

The water distribution network in Central Beira especially is in poor condition and loss of water through leakages is considerable. The frequent falls of the water pressure increase the chances of contamination, as at the same time the sewerage system is not functioning. More detailed description of the system has been given in the Water Master Plan, prepared by the Project.

Figure 1 shows the Beira Water Supply and Sewerage System in a map.

The management, operation and maintenance of Beira's water supply and sanitation system is the responsibility of the state enterprise "Aguas da Beira" (AdB). The company is under the authority of the Ministry of Construction and Waters.

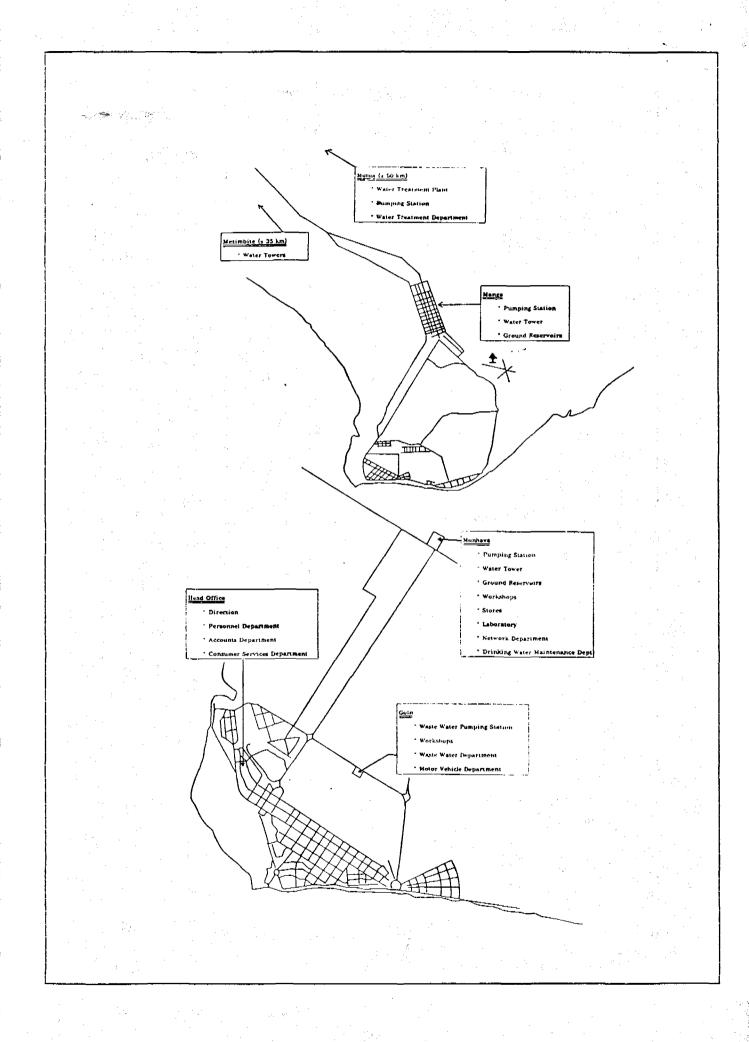

Aguas da Beira has a total staff of 381 people (1989). In practice the number varies between 360-400. On request of the Project, AdB has recruited about 50 casual workers so that the total number of employees can rise until 450. The programme of the Supervision Unit established by the DNA, includes 10 posts of five different profissions. There are skilled manpower e.g. masons, fitters, electricians, etc. Their skills will not, however, meet existing and future needs. At the management level the main problem is a lack of educated personnel, and those that there are, have very limited experience.

Table 1.1 shows the educational level of the personnel (1989) supplied by AdB. It indicates, among other things, that one-third of the personnel can neither read nor write.

The Finnish assistance programme includes the preparation of the institutional development plan for Aguas da Beira. In addition to organizational aspects it consists of the preparation of the comprehensive training plan for the personnel of Aguas da Beira.

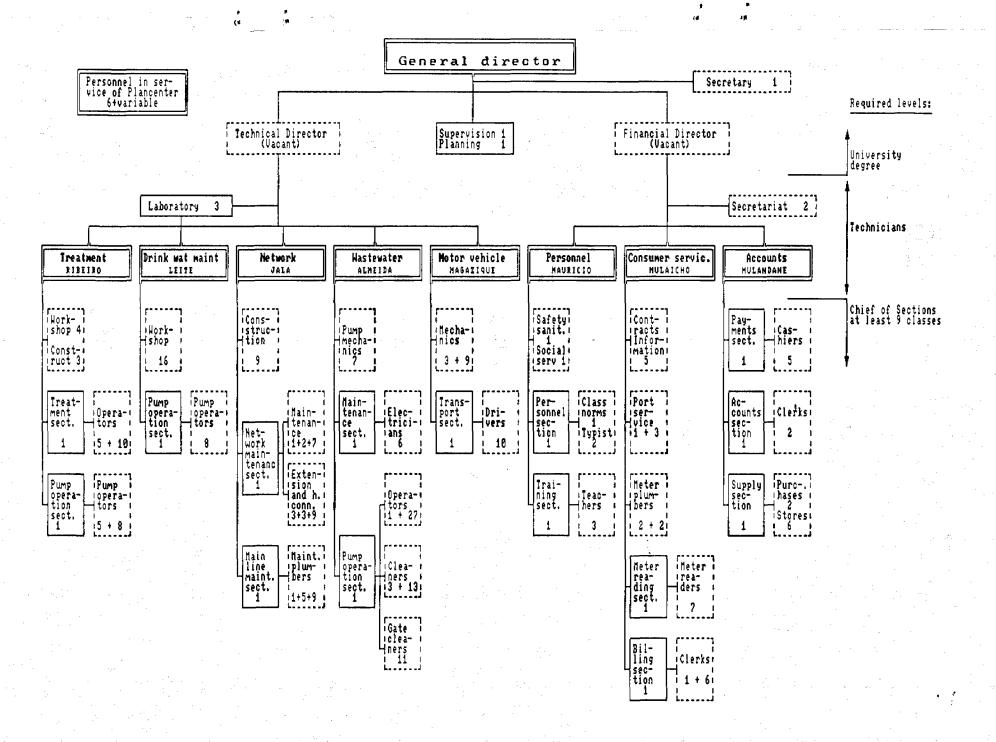

Figure 2 shows the existing organizational structure of Aguas da Beira personnel. The Training Plan has been prepared on basis of the present organization but it is easy to take into account the structure and requirements of the future organization which will be proposed later. In appendix 1 there are however listed AdB's actual personnel by names, as detailed as possible to identify the persons in question, if needed.

The appreviations of departments, sections and training courses applied in the text, tables and appendices are presented in appendix 2. -

2. OBJECTIVES

In order to ensure a sufficient supply of good-quality water for consumers and the cost effective functioning of Aguas da Beira the distribution system has to be renovated and new components for the system have to be constructed, but above all the skill content of the personnel at all levels has to be raised.

In order to improve the skill standards a comprehensive training plan has to be prepared and implemented.

The comprehensive training plan will be composed of:

Identification of Training Needs;

The training needs can be found out by working out the skill and task analyses where the employees skills are evaluated against their daily tasks. The possible changes of tasks, according to organizational development, have been taken in the consideration on the identification of training needs.

Survey of Training Facilities;

In order to implement training programmes successfully the appropriate training facilities (workshops, classrooms, tools and equipment) as well as competent teaching staff should be available.

Preparation of Training Programmes;

The training programmes are worked out in conformity with the skill and task analyses. The effectiveness and up-to-date competence have been emphasized in cost estimates.

Follow-up;

It is vital to evaluate how well the given training meets aspirations of the trainees and requirements of the employer, and what kind of programmes and measures should be implemented in the future.

3. IDENTIFICATION OF TRAINING NEEDS TASK AND SKILL ANALYSES

Task and skill analyses have been prepared on the basis of the existing organization and practice.

If the organization is renewed the operational units may to a certain extent be rearranged and departments combined.

It will not, however, have any significant influence on the training planning, because basic operational functions, in general, will not change. Possible changes can easily be taken into account when the possible new organization will be approved and implemented.

The first step was to collect adequate information on the personnel of Aguas da Beira, such as age, educational background, date of recruitment, position in the organization and professional qualifications. That was mainly made on basis of AdB's personnel files and statistics.

Secondly, department chiefs, section heads and other key employees were interviewed. The questionnaire consisted of items such as language skills, training background, work experience, scope of activities and training aspirations. A separate detailed report of procedure, results analyses and conclusions of the interviews has been prepared by the Project (See document 'Skills and tasks analyses - report of the personnel interviews')

Thereafter, the task and skill analysis forms were prepared. The required data was sorted out, evaluated and put into the forms.

Finally a second round of interviews was carried out so as to ensure that skills and tasks that were filled in were in conformity with the employees' job descriptions and wishes.

Psychological tests for the key employees were held and reported separately. Also during the short courses organized by the project, abilities and skills of the trainees were recorded.

The task and skill analyses comprise more than 40 various occupations and 279 employees at various skill levels of AdB. It constitutes 73 per cent of the total labour force covering all operationally significant levels and occupations in the organization.

Detailed analyses is presented in appendix 3. Scope of activities and skills required are analyzed per each employee. The Operators of the Water Treatment Department participated on the training programme planned and provided by the emergency project of Simonazzi Company financed by

the Italian Government. The training plan was evaluated and verified to be well prepared.

The skills of corporate planning and management and on-thejob training are not mentioned in the lists presented in appendix 3. These are however required skills of all management and middle management staff.

10 key employees recruited on request of the Project are included on the analyses as well as the SUPRA (Supervision Unit) personnel. They will continue in AdB after termination of the Project if necessary.

Table 3.1. Summary of employees included the process

Placement	Number

4. SURVEY OF TRAINING FACILITIES

One of the most important aspects in the preparation of the training plan is to find out reasonable facilities for implementation of training:

- rooms and shops for theoretical and practical lessons must be available
- tools, equipment and materials matching the syllabus are equally important
- facilities for full board and lodging may also be required
- the availability of competent teachers and instructors is of paramount importance

The survey of the training facilities was carried out on the basis of the above factors.

The facilities existing in Beira, Maputo and Lisbon were listed down according to the information available. Final evaluations were made on the basis of visits to the establishments and facts found during discussions.

The results of the survey are divided into five groups - Beira, Maputo, Lisbon and Tampere. Beside these, preliminary contacts with the Tete Training Center has been taken.

Summary of the survey of training facilities is collected in appendix 4.

4.1 BEIRA

COMMERCIAL SCHOOL AMILCAR CABRAL

Training places Teachers 529

33

Departments:

- typing
- secretarial services
- accounts

The school has well-furnished facilities and competent teachers. The teachers are mainly medium commercial technicians with long teaching experience. The school owns a large profissional library, from where the students are allowed to borrow books referring to their studying subjects. Arranging for courses in industrial accounts, office and accounts management, typing; statistics etc.

The school is situated in Ponta-Gea, about 1 km far from the AdB head office.

Contact person: Director Fernando Chironda, office telefon 325039

COMPUTER TRAINING AND DATA PROCESSING CENTRE

Training places 12
Teachers and instructors 4

Well-furnished facilities just in the city center close to AdB head office. Very competent, experienced and motivated staff. It is possible to borrow magazines and news corcerning information technology...

Arranging for various kind of courses in micro- and minicomputing, f.ex. courses for most common PC-programmes like Wordperfect, Lotus-123, Symphony, dBase, MS-DOS, Wordstar, Multimate, BASIC and COBOL. DOS-driven Amstrad computers with 2 floppy disk drivers are used for teaching.

The company has abilities and skills to maintain and repair computers. For serious problems they have contacts to Maputo, from where repair technician may come, when request.

Contact person: Director Américo Murtar, office telefon 324820.

EMODRAG E.E.

State dredging company Emodrag is organizing courses on English language and computer applications.

There are 20 training places for English teaching and only three for computers. The company has supplied the training by electroprojector, video equipment and sufficient reading and exercise materials.

The English teacher is very competent and hired from the Industrial Institute.

Contact person: Rui Marudeira, Chief of Personnel Department.

HIDROMOC E.E.

 workshops for reparation of pumps, valves and motors; makes also plumbing and pipefitting

- technician level instructors. Possible to arrange more skilled instructors from the head office of Hidromoc-Maputo or from the DNA Training Center.
- well-equipped facilities. Possible to use on teaching special equipment of AdB.

Arranging for practical courses in pump mechanics and operations, electrical repairs and installations, plumbing and pipe-fitting.

Under Ministry of Construction and Waters.

Contact persons: Director Tembe or engineer Hilário, office telefon 326082.

Contacts in Maputo head quarters: Steven Hugman (British expert), office telefon 01-400696 or 01-400181/4, telex 6-234, FAX 01-732006.

INDUSTRIAL AND COMMERCIAL INSTITUTE

Training places 450 Teachers 40

There are five departments

- Mechanical
- Electrical
- Roads and Traffic
- Accounts
- Civil Engineering

Facilities are satisfactory, except in the case of special tools and equipment.

Teaching is mostly theoretical oriented and not proper for the requests of AdB staff.

Contact person: Director Avelino Junior, office telefon 363061.

INDUSTRIAL SCHOOL

Training places 926 Teachers and instructors 76

Departments:

- Mechanics, incl. fitters, plumbers, automechanics and draftsman.
- Electrical, incl. general electricity, installations
- Civil Construction, incl. foreman and surveying.

Autoworkshops are well equipped. Other facilities are satisfactory. Lack of special tools. Technical and material support of Danida and Soviet Union.

The school has experience on arranging courses by request especially on motor vehicle repairs and maintenance.

Industrial Institute and School are located in Matacuane some kilometers far from the head office of AdB.

Contact person: Director Silva, office telefon 363162.

NATIONAL PROFESSIONAL TRAINING CENTRE UNDER MINISTRY OF CONSTRUCTION AND WATERS

Training places
Instructors

50 3

Existing facilities locating in Palmeiras are below standard. New facilities are, however, under planning.

Regular courses on construction foreman (lower management) with duration of 6 months.

Contact person Director Joaquim Magumisse, office telefon 312035/7.

SHIPYARD OF BEIRA

- Own training school
- Experienced and competent instructors, also international experts in teaching staff
- well-equipped facilities

Organizing courses in fitter-mechanics, welding and machine-shop operations.

Due to internal and managerial problems the shipyard of Beira is not able to provide teaching of any kind at least during some years.

Contact persons General Director João Portela Macuba, office telefon 325309 or Production Director Paulo Fernandez Dimitri, office telefon 324029/324033.

TEACHER TRAINING COLLEGE FOR ADULT EDUCATION
(Centro Formação dos Educadores dos Adultos, 1° de Maio, Manga)

Training places
Teachers and lecturers

120 20

Seminar-type lectures given by very competent teaching

staff.
Practical exercises are held at companies and firms.

Overall facilities in Manga are good including accommodation.

Contact persons: Pedagogical Director Coelho or ARO-cooperant Paula Oksanen, office telefon 302129.

4.2 MAPUTO

INDUSTRIAL INSTITUTE

Training places Teachers 800 75

incl. international experts

Departments

- General Mechanics
- Electrotechnics
- Chemistry
- Civil Construction

Technical staff is experienced and competent. Training facilities are good. Modern, well equipped hydraulic and water chemistry laboratories. Computer facilities.

No accommodation.

Providing short courses by requests or refresher courses on management, maintenance and all of the teaching areas including to department's topics.

Contact persons: Director Casimiro Cala, or pedagogical Director Gabriel Machado, office telefon 01-415244.

INDUSTRIAL TRAINING CENTRE

Training places Teachers 240

16

- in addition, national and international lecturers financed by SIDA and UN.

About 80 teachers by hour from various companies.

Training courses are management oriented. Facilities are satisfactory and instructors very competent.

No accommodation possibilities.

Contact persons: Director Carlos Ferreira or Vice Director Arlindo Dhancale, office telefon 01-24600, telex 6-235 RHMIE MO

MINISTRY OF PUBLIC ADMINISTRATION, TRAINING DEPARTMENT

Several training centres, two of which are situated in Maputo. No well organized training.

Training is provided in administrative subjects.

Contact persons: National Director of Public Functions Leonardo Simbine or Administration Technician João Pitroce Simente, office telefon 01-427574.

PROFESSIONAL TRAINING CENTRE UNDER NATIONAL DIRECTORATE-OF WATERS (DNA Training Centre)

Training	place	es 🦠		150
Teachers	_	•		24
- incl	. 12	international	experts	

After renovations the number of training places will amount to 250.

The training facilities will then comprise classrooms, workshops, laboratories, library services etc. All fully furnished with modern equipment and tools, mainly financed by foreign governments.

Training and accommodation facilities are excellent. Training courses are practically oriented and centered in water supply and waste water engineering.

The Establishment is organizing courses at various skill levels especially on the area of water supply, for example:

Pump Operations and Maintenance	8	weeks
Water Treatment Operations	8	11
Pump Mechanics	8	18
Electricians	12	**
Laboratory Assistants	12	91
Plumbers	6	11
General Management	4	. If
Store Management	6	11
Planning of Human Resources	8	**

Contact persons: Director Lourenço F. Rodrigues or vice Director Xavier Tembe, telefones: 01-732122 (*), 01-733862 (Director), 732122 or 733862. Telex: 6-521, FAX 01-421403.

<u>UNIVERSITY OF MAPUTO</u> (Universidade de Eduardo Mondlane)

Water engineering programme at the Civil Engineering Department for a degree of B.Sc.eng. has a duration of 5 years. The annual number of graduated students at the Department has been between 7-8, but will increase to more than 10. Most of the graduated water engineers are being allocated by DNA. One part has oppurtunity to continue post-graduate studies abroad.

At the water section there are at the moment 4 mozambican employees and 2 Dutch experts.

About 80% of books in the library are in English, the rest in French and Portuguese only a few.

Contact person: Dr. Alvaro Carmo Vaz, office telefon 01-733210. (Faculty of Engineering)

4.3. TETE

Tete Water Training Center is supported by the DNA and Danida. They are organizing 2 years professional courses on plumbing and pump mechanic. According to the information received from the DNA, the courses are very practical oriented and suitable for training of AdB's staff.

More information has been requested, but due to very poor communication facilities, not yet received.

Contact persons:

Centro de Formação Professional de D.P.C.A. Director Evaristo Mateus João, (or Ole Aundal, Danida) C.P. 600 Tete Telefon 152 - 2346

4.4 LISBON, Portugal

HIDROPROJECTO

Hidroprojecto is a consulting company specializing in water supply, water treatment, treatment of waste water and refuse collection. The company is arranging courses within the planning and construction fields.

Teaching is practically oriented, instructors well educated, experienced and competent and overall facilities are good.

Contact person: Marketing Manager Lopes dos Santos, telefon 7580141 or 7580545, telex 14368 HIDRO P, Telefax 01/7589575,

Address:

Av. Marechal Craveiro Lopes 6 1700 Lisbon, Portugal

EMPRESA PUBLICA DAS AGUAS LIVRES-EPAL

EPAL is the Waterworks of Lisbon supplying water for the city and surrounding provinces, 3/4 of Portugal's water consumption altogether.

EPAL is arranging training in the managerial, behavioral and technical skills as required in dealing with everyday problems and activities within the operation and maintenance fields of water supply engineering.

Training facilities are good, and teaching is practically oriented. The staff is well educated, motivated and skilled.

Contact person: Address:

Director Carlos Saraiva Conselho de Gerência

EPAL - Empresa Pública de Aguas

Livres

Av. Liberdade 24 1200 Lisbon, Portugal

4.5. TAMPERE, Finland

Institute of Water and Environmental Engineering of the Tampere University of Technology is organizing postgraduate courses in water supply and sanitation for B.Sc. level engineers of developing countries. The programme is financed by Finnida.

The goal of the course is that between 15 and 20 annual participants will be awarded the degree of M.Sc in Civil Engineering during 18 months programme. First 12 months is arranged in Tampere and the last 6 months is planned to take place in the participant's home countries by preparation of Master's thesis.

The course programme covers widely the whole area including basic scientific background, water and wastewater technology and water systems management. Seminars and workshops have a heavy role of the course. One week study tour has normally been arranged during the theory period.

Facilities are excellent and teaching staff represents the professional top of Finnish water engineers and other experts.

Contact address:

Tampere University of Technology

5. TRAINING PLAN

5.1 GENERAL VIEWPOINTS

Training functions can be divided into two main types:

Off-the-Job Training

- short term
- long term

On-the-Job Training

Off-the-Job Training is applied generally in the form of courses, seminars and workshops outside normal work places complying with the approved syllabuses and programmes. In addition, there are study tours and supervised work experience. The training is provided at local, national or international levels in accordance with the resources available.

The On-the-Job Training is conducted in work places as daily instructions and guidance. Instructional visits to factories and manufacturers' agencies constitute part of On-the-Job Training activities.

When considering what type of training would be the most appropriate, one must take into account several factors, such as:

- Educational backgrounds of the trainees
- Are the skills to be trained major or minor ones
- The availability of tools and equipment as well as competent instructors
- Scope of activities of the trainees

Both types of training are utilized in the following training plan.

In addition to the conventional technical and management skills, computerized skills were in several interviews regarded as useful, particularly in administrative offices. It is supported by the fact that for example in the Electricity Supply Company of Mozambique (Maputo) a computer system has been established, and in Beira branch offices an IBM computer with three terminals has now been installed.

In the light of the above an introductory course into information technology and a course for computer aided text processing have been included. Only those employees, which will work directly using computers, will take part in these courses.

In addition, training for computer operators should be organized, but only when decision about computerized

financial administrative system has been taken. The training should be included on the purchase of the equipment.

In order to keep abreast of international developments it is important to collect up-to-date information on overseas organizations and technologies.

Particularly for the keyemployees who are in charge of planning and overall development overseas experiences and contacts are most useful. The ability to speak English is a key-factor in international communication.

Special equipment and machinery of overseas origin often have instructions for installation and maintenance only in English. For successful installations, operations and care technical staff should be able to understand English. During the first phase of the Project, altogether 6 employees of AdB participated on basic English teaching organized together with the Port Container Project/ Plantrans.

There is a large number of illiterate employees in the organization. In order to make it possible for them to improve their professional skills, reading, writing and other basic skills should be taught. Motivation of the illitarate workers to study further should be risen by better salaries, incentives and other rewards. Also the teaching skills of adult teachers should be brought upto-date. Illiterate employees more than 40 years old have no capacity and willingness to continue their basic studies. The teachning should thus be concentrated to improve abilities of younger employees.

5.2. OFF-THE-JOB TRAINING PLAN

5.2.1. Training Courses

Training courses have been determined on the basis of tasks and skills analyses and the existing training facilities. Totally 28 separate courses were named and the participants for each course choosen.

According to excellent facilities of the DNA Training center, 13 courses are proposed to organize there, with 81 participations. Beside the proposed course in Lisbon, all the rest courses are supposed to have in Beira, in several organizing institutions. The total number of participations is planned to be 245.

The courses cover all of the main activities of AdB. Some courses are divided to basic level and advanced level training. The maximum number of participants on course at the same time is 13. Therefore some courses should be arranged two or three times. On this stage the durations of the courses can not be long, because the main aim is the provide basic training for all operational staff

during the first implementation phase of the Project without hambering the normal operation of the company. Summary of training courses including names of each course, organizing establishments, participants and durations of the courses is presented in appendix 5. Each course has been indicated with a letter A..Ö for supporting identification of the courses and reading of the plan.

5.2.2. Course Outlines

The course outlines for each course (except course Ö - computer operating, which will be planned by the possible computer system supplier) are collected in appendix 6. They are made in close cooperation with organizing establishments according more or less the following procedure flow:

- (1) First contacts to the institutes after completetion the study of training facilities and requests on their real willigness for cooperation. Combination of the course topics in general.
- (2) Draft proposal of the course outlines in Portuguese, prepared by the Project.
- (3) Presentation of the course outlines to AdB and organizing establishment for their comments. Preliminary quotations and price negotiations.
- (4) Collection of the comments and preparation of the final course outlines.
- (5) Presentation of the course outlines to the institutes and AdB, final price negotiations. Final comments. Discussions about detailed curricula and other implementation matters.
- (6) Translation from Portuguese to English.
- (7) Reporting in the Training Plan.

The detailed curricula of the planned courses will be made mainly by instructors, but under the supervision of the Project. The detailed planning will start as soon as the decisions of the implementation of the Plan has been made.

The course outlines have been made especially for the purpose of the AdB's training programme. The courses are very practical oriented and no any minimum educational level is threfore required. Knowledge of reading and writing is thus an advantage, of course.

5.2.3. Guidelines for Implementation

In order to implement the training plan successfully the following points should be taken into account.

The training officer who is in charge of the implementation has to make an inspection visit to each training establishment before the starting date of a course or seminar. The purpose of the visit is to ensure that

- required training facilities (workshops, classrooms, equipment, tools, visual aids etc.) are available
- teachers and instructors comply with the approved syllabuses in preparation of lessons or exercises
- food and accommodation services are in order.

It is important that participants are fully aware of training objectives and contents before the start of courses or seminars. The easiest way to do it, is to provide the participants with a copy of the course outline or seminar programme and other vital information.

Inspection visits during the training are also necessary. In so doing the inspecting officer can ensure that the approved training programme is being complied with, and problems slowing down the planned progress are resolved.

It is desirable, that some participants from other ongoing projects or companies can be sent to the courses. Then it will be possible to change impressions and experiences.

At the close of courses and seminars the participants should be provided with certificates, the format of which has been designed in cooperation with the training establishments. In addition, the participants should be informed about the functions relating to the follow-up procedure.

For supporting the implementation of the Training Plan, several summary tables were prepared:

- The training matrix is presented in appendix 7.
 There can be seen easily, in which courses each employee is supposed to take part.
- The costs of each course are listed in appendix 8. The total cost is more than 155 000 US\$.
- A proposal of course calendar has been collected in appendix 9. It consists of 6 pages. First two pages indicates the general time schedule of the courses during the implementing time, four years. The four other pages represents the time schedule by each employee included the Training Plan. It can easily be seen, at which course and at what time period each employee will join to the training programme.
- Substitution system of AdB has been shown in appendix 10. The time schedule of the programme has been planned in concordance with substitutions so, that operation of the company will suffer as little as possible.

It was agreed with the organizing establishments, that one part of the costs should be paid by material aid-because of difficulties to purchase teaching materials to Mozambique. The following agreeds can be listed per mentioned course:

- (B) Adult Training Methodology/ Teacher Training College for Adult Education, material value 300 US\$:
 - Several sets of ballpoint pens
 - Pencils with separate leads
 - Files
 - Bags
 - Shoes, t-shirts
 - Typewriter
- (G) Typing/ Commercial School of Amilcar Cabral, material value 700 US\$:
 - 60 ink tapes with 2 colours (black-red)
 - 20 rices of typing/copying paper A4
 - 20 bettles of correction paint
 - 10 bottles of fine lubrification oil
 - 4 boxes of A4 carbon paper
 - 4 boxes of wax paper for copying machine
 - Typing manuals and books
- (H) Office Management/ Commercial School, material value 400 US\$, the following manuals:
 - Voltaire Jorge Baptista da Piedade: Manual de escritório comercial
 - H. Bernaténé: Prática de secretariado
 - Editoral Pórtico: Manual de secretaria moderna
 - Georges Bousquié: Como redigir um relatório
 - Luís M. Ensenyat Daura & J. L. Artigas Rimbau: O livro do secretária
 - M. H. Fabre: A secretária e o seu chefe.
- (L) Computer Aided Text Processing and (M) Introduction to Information Technology/ Computer and Data Processing Centre, material value 425 US\$ + 4760 US\$ = 5185 US\$:
 - Manuals, magazines etc. concerning hardware and software
 - 3 boxes of 5½" diskettes
 - 2 boxes of 3½" diskettes
 - Voltage regulator UPS, 500 W
 - Ribbon (80 and 132 columns) for Amstrad DM 300 printers
 - Templates for writing text and symbols

Contracts with the organizing establishments will be done after the decisions about the financing have been taken. Before that regular contacts should be kept up and inform the development the situation.

5.2.4. Follow-up

The purpose of follow-up activities is to examine and evaluate the practical usefulness of training, to help in the application of what has been learned, and to provide for a continuity of training and education.

A few months after the completion of a course or seminar is the time to start follow-up activities.

Evaluation of Training

The suitability and usefulness of the skills and knowledge acquired have to be assessed. It can be done by observations and interviews. If case there are several employees who have completed the same training, the correlation method will produce reliable results. If the correlation between job success and training results or between job performance prior to the course and after is high the training course has been well designed and implemented.

The training officer together with the superior of the employees should carry out the evaluation procedure.

Help in Practical Applications

During the application of skills learned an employee may need concrete, detailed advice or certain services to be carried out. If this advice or service are not available the employee may be unable to apply what he has learned. For example, if a welder does not have the special electrode he has been taught to use, he is unable to apply new skills. In some cases interpretation of new instructions may prove too difficult to understand, and the application will not succeed.

In these cases help is to be provided, otherwise the particular training has failed to meet the course objectives.

Further Personal Development

Due to the rapid development of techniques and management requirements the continuous learning shall be of every day practice.

Findings in the course evaluations will give good indications of the subject areas to be covered by further training.

In addition to on-the-job training the further training may be organized according to the following guidelines:

- more specialized courses or seminars, dealing with selected subject areas or methods
- more advanced courses, preparing employees for higher grades or promotions
- updating courses, bringing employees up to date

<u>Liaison of Training Establishments with Former Course</u> Participants

Regular contacts and visits between the training establishments and former course participants are very useful for both parties, as regards the following:

- getting feedback on the usefulness and effectiveness of training
- identifying cases where the Establishment might assist in practical applications of the skills
- supplying the company with the recent developments within the subject area
- offering special training for the needs of the company.

5.3. ON-THE-JOB TRAINING PLAN

5.3.1. Guidelines

On-the-job training is even more important part of the training plan, than off-the-job courses, because the nature of on-the-job training is more effective and long lasting, when it is well planned and organized. That was the reason, why the project requested home office support to produce a document as guidelines for on-the-job training. It gives basic frames, directives and support to practical implementation of on-the-job training activities and also for training of trainers. The document is presented in appendix 11.

Beside this, the Project developed during the first phase some practices concerning on-the-job training planning, reporting and evaluation. Examples of these activities are presented in appendix 12 serving as a model for practical implementation.

5.3.2. Suggestions for on-the-job training

A number of on-the-job training topics including general outlines and target groups is being presented in this chapter. They have been produced on the basis of AdB's problem analyses presented by the Appraisal Mission. These examples have been chosen seeking the most serious problem areas.

The first mentioned courses include mainly managerial skills for administrative and technical sectors and the last ones mainly basic technical and other supporting skills.

General Management

For General Director, chiefs of Departments and qualified technicians

Content: Organizations, information flow, delegation of orders, supervision, progress evaluation, reporting, communication, public relations, liaisons.

Personnel Administration

For Chiefs of Personnel Department and Section Content: Recruitment, personnel practices (filing, salary payment etc.), tasks and skill analyses, carrier development, motivation, planning of job descriptions, training plans.

Workshop Management

For Chiefs of workshops in Goto, Munhava and Mutua Content: Safety rules and equipment, job distribution, job follow-up and supervision, result control, work measurement, filing and registering, workshop organization.

Maintenance Management

For Chief of technical Departments

Content: Creation of regular maintenance system, preventive maintenance, organization of maintenance, files and regords, supervision techniques.

Transport Management

For Chief of Motor Vehicle Department and Chief of Transport Section

Content: Vehicle costs, transport costs, control, log-books and files, fleet maintenance, information flow.

Water Quality Management

For Laboratory Technician, Technical Director (General Director)

Content: Laboratory management and operation, water quality control, alarm systems/liaisons, chemical use control, quality limits and standards, analyses of results.

<u>Material Management</u>

For Chief of Accounts Department, Chief of Supply Section, Officer in purchase and stores Content: Stores management, purchase procedures, cost follow-up, tender evaluation.

Office Management

For Chiefs of Departments and Chiefs of Sections acting in administrative areas

Content: General management, filing, secretary organization, equipments and other facilities, work measurement and control.

General course of AdB

For General Director, Chiefs of Departments, Chiefs of Sections, qualified Technicians

Content: Functions, duties, organization, personnel and problems of AdB.

Management Information Systems

For General Director, Chiefs of Departments, Chiefs of Sections, qualified Technicians

Content: Need of information flow, alternative systems, planning of information systems, informations systems in practice.

Financial and Investment Planning and Management

For Chiefs of Accounts Department and Section, Chief of Personnel Department, Chief of Consumer Service Department

Content: Accounts systems, financial planning, budgeting, need of investments, benefits of investments, management, control and monitoring

Cost control, budget control

For Chief of Accounts Department

Content: Importancy of cost control, cost control
methods, budget control

Tools, Equipment and Spares Management

For Chief of Supply Section, Officer in Stores, Chiefs of technical Sections

Content: Planning, filing, stores, control, maintenance.

Data Reporting

For General Director, Chiefs of Departments, Technicians Content: Planning and layout of content, data organization, graphical presentation, statistics, evaluation of results, analyses and reporting.

Manual Development

For Chiefs of Departments, Chiefs of Sections, Technicians

Content: Survey of needs, layout and content, general viewpoints of preparation, presentation principles.

Meeting organization

For General Director, Chiefs of Departments

Content: Invitation, agenda, general roles, oral communication, election, notes and speed writing, minutes preparation, chairman functions.

Material Quality Control

For Chiefs of technical Departments and Sections, especially Network

Content: Standards, requests, production procedures, material knowledge, quality measurement techniques, control matters

Construction and Maintenance Supervision

For Chiefs of Network Department and Section, Supervision Technicians

Content: Requests of supervision, regulations and standards, supervision activities in practice, follow-up procedures

Physical Planning

For Planning Technician, (Technical Director)

Content: Data and information collection, target determination, planning procedures and criterias, cost and benefit analyses, impacts to the community, socioeconomic studies, environmental impacts

Technical Water Supply and Sanitation Planning

For Chiefs of Network, Oparation, Treatment, Waste Water Departments, Network Technicians, Planning and Supervision Technicians

Content: Basic science (mathematics, hydrology, hydraulics, chemistry), water sources, treatment methods, pumping stations, distribution centers, consumption estimation, detailed network and water distribution calculations and planning, waste water supply and treatment, special condition in Beira, plan reporting and presentation

Office Equipment

For Secretaries and typists

Content: Use of telex, telephone, telefax; typing, meganograph machine, maintenance, furniture maintenance, cleaning and office organization.

Consumer Service

For Clerks of Contracts, Information and Payment Content: Recieving clients, communication, proper service, personal character development

Control of Water Payments

For Chiefs of Consumer Service and Accounts Departments, Chiefs of Water Meter Reading and Billing and Payment Sections

Content: Filing systems, meter reading, claims, control
methods

Water Sampling and Analyses

For Laboratory staff

Content: Sampling programme, sample taking, water quality analyses (standards and methods), store control and purchase procedures, reporting and filing

Environmental Impacts

For Chief of Treatment, Operation, Waste Water and Consumer Service Departments, Laboratory Technicians, Nurse

Content: Raw water pollution sources, see water impacts to raw water, waste supply, waste water treatment, drainage, epidemies and preventive acts, public education, occupation safety

Water Treatment

For Water Treatment staff, Laboratory technician Content: System layout, chemical basis, treatment phases, dosage regulation, quality control, information flow

Pump Operation

For Pump Operators of Drinking Water Maintenance (Operation) and Waste Water Departments Content: System description, principles of operation, accessories, maintenance, filing

Occupational Health

For First Aid Men, Foremen, Chiefs of technical Sections, Workshop staff

Content: Risks in work environmental, prevention of accidents and deseases, safety materials, first aid, break gymnastic

Draftsman skills

For Planning Technician, Chiefs of Network Department and Section, Draftsmen

Content: Use and maintenance of equipment, drawing techniques, symbols, archive, materials.

Water Meters

For Water Meter Mechanics, Meter Plumbers, Plumbing Technician in charge of Water Meters Content: Types of water meters, reading, testing,

repairing, installation, storing

Preventive Network Maintenance

For Network staff, especially Chiefs of Department and Section

Content: General aims of preventive maintenance, methods description, flushing, practical implementation, follow-up.

Network Construction and Installation

For Network staff

Content: Materials, tools, use and maintenance of equipment, material handling, diging, installations, fittings, finalizing works, pollutions

Network Repairs

For Chief of Network Section, key Plumbers
Content: Leakage detection methods, diging, cables, other

tubes, traffic arranging, material handling, repair equipment, repair methods, pollution, finalizing works

Cleaning

For Cleaners and other Helpers

Content: Cleaning equipment, cleaning subtances, material characteristics, working methods in different cases.

5.3.3. Seminars and Workshops

Seminars and workshops are more specialized than courses. The duration varies generally from one day to one week. The teaching content is centered normally on one subject area, such as "Modern techniques in maintenance management", "Pollution and environmental problems and their solutions", "Filing and documentation Techniques", etc.

Participants are generally selected from management levels. Particular attention has to be paid on appropriate teaching methodology, due to the short duration of the seminar or workshop. Typical participative methods are the following.

Project methods

Where participants are asked to undertake a particular task leading to a required result.

Case study method

Where participants have to diagnose the causes of a particular problem, or participants have to set out to solve a particular problem.

Simulation methods

Management games

Decision-making exercises where participants in small groups organize themselves to make decisions on the basis of a sequence of problems.

Role playing

In which participants assume an identity other than their own. For example, two trainees might act out an interview, one taking the role of chief of department, the other of a subordinate, in which the chief is evaluating the job performance of the subordinate.

In-Basket (in Tray)

Trainees are given a series of files, papers and letters similar to those they will be required to deal with at the place of work. Trainees take action on each piece of work. The results are evaluated.

Business games

Trainees are given different management roles to perform. One group may be concerned with network maintenance, another with consumer services and so on. These groups "run" the company. Results of actions and decisions are then evaluated.

5.4. LONG TERM TRAINING

As high educated staff as needed is one of the most important advantages of the company. AdB's actual personnel is very low level in this matter. Beside the descriped off-the-job and on-the-job activities, it is necessary to have a look for the longer future development of educational levels.

Generally that means, that each employee should rise his schooling level both by studying in the school organized by the company as well as studying at the industrial, commercial and general schools and institutes, even at the universities. In practice the studies should be carried out partly studying evenings or having founds and support of the company for full day studies.

The Training Center of the National Directorate of Waters (DNA) is organizing long lasting (= until one year) professional courses on the following topics:

- Water Supply and Sanitation "A" and "B"- levels
- Administration and Finance "A" and "B"
- Pump Mechanics "A" and "B"

Admission educational level for the "B"-courses is 6 classes and for the "A"-courses is basic technician (= 9 classes of industrial or commercial school).

The Training Center is organizing also shorter, 6 months courses, which give professional diplomas to the participants. The participants should have at least 9 classes of education. The training topics are listed below:

- Water Supply and Sanitation "A"
- Administration and Finance "A"
- Analyses of Waters "A"
- Pump Mechanics "A"

The training programme for the year 1991 of the DNA Training Center is presented in appendix 13. All of the courses with durations and requested admission levels of the participants are listed there.

The detailed long term training plan for the key personnel of Aguas da Beira is presented in appendix 14. The table shows, that almost everyone should rise his/her educational level by several steps, which can take between 2 - 5 years studies.

The table has been prepared on the basis of the actual staff, but it can be interpretated more generally. Thus the colum "required long term training" means also the required educational levels for each posts. So it gives criterias to the recruitment. If some post is or will be vacant, it should be filled with employee, whose educational level corresponds with the listed required levels.

The aim on planning the long term training was to rise both general qualifications as well as professional knowledge of the key personnel to that level, which is sufficient to the proper and correct operation of the whole company. Following this principle, the level development by different steps is the following:

- 9 classes or basic technician
- 12 classes or medium technician
- B.Sc. (in Mozambique only at the University of Eduardo Mondlane, Maputo)
- M.Sc. and higher (abroad)

Normally it has been planned, that each employee should rise from the lower step to the upper level. In some cases it will not be possible because the employee is too old or his capacity is not sufficient or that level is even not needed.

In figure 2 the schooling system of Mozambique is shown. It was changed after the year 1989 and the both systems can be seen in the figure. In the actual system the landmarks are after 6, 9 and 12 years (or 11 years in general line) active studies.

On the technical fields the normal way after primary school is to go through industrial school and institute to the university.

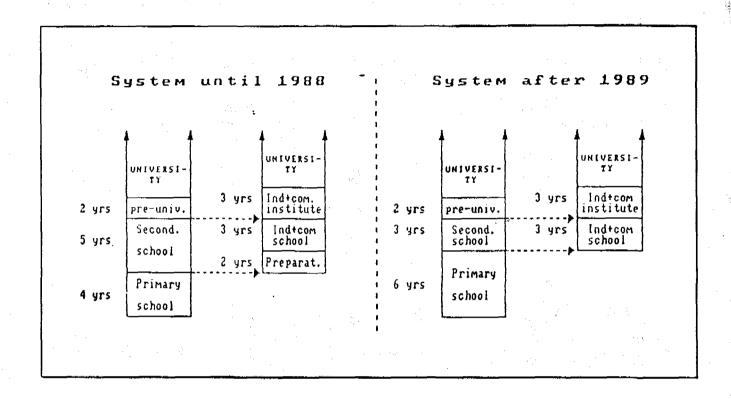

Figure 2. Schooling system in Mozambique before and after 1989.

LIST OF APPENDICES

- App. 1. AdB's personnel list by names of the key employees
- App. 2. Abbreviations applied in the text and tables
- App. 3. Tasks and skill analyses, identification of training needs.
- App. 4. Summary of the survey of training facilities.
- App. 5. Training Courses
- App. 6. Course Outlines
- App. 7. Training Matrix
- App. 8. Costs of the courses
- App. 9. Course Calendar
- App. 10. Substitution system of AdB's organization
- App. 12. Instructions to on-the-job training planning, reporting and evaluation.
- App. 13. Training Programme 1991 of the Professional Training Center under the National Directorate of Waters (DNA)
- App. 14. Long term training needs of the key personnel of Aguas da Beira

Identification of training needs

Tasks and skills analyses

TOP MANAGEMENT

POSITION	NR	SCOPE OF ACTIVITIES	SKILLS REQUIRED
General Director	1	 Overall responsibility for AdB functions Counterpart to the Project Manager/Plancenter 	 Water supply and was tewater engineering General Management including basics in Information Techn.
TOTAL	1		

TECHNICIAN

Technician	1	 Supervising activities of development projects Counterpart to the Water Supply Engineer 	 Project planning and management Construction, operation and maintenance management Basics in Inform. Technology
TOTAL	1		

SECRETARIAT

Clerk	2	CorrespondenceTyping, filingPurchase of office materials	-Computer applications
TOTAL	2		

SECRETARY OF GENERAL DIRECTOR

Clerk		1	TypingKeeping recordsOther secretarial duties	-Computer applications
TOTAL	:	1		

LABORATORY

POSITION	NR	SCOPE OF ACTIVITIES	SKILLS REQUIRED
Laboratory Technician Laboratory Assistant	1 2	Water quality controlTests and analysisRecording and filing	-Water quality control methodology
TOTAL	3		

WASTEWATER DEPARTMENT

Chief of department	1	- In overall charge of wastewater department	Managerial skills - Pump technology - Wastewater techn.
Pump mechanic	7	- Pump reparations and installations	- Repair methods
Chief of operation section	1	 Management and super- vision Work planning 	- Managerial skills - Pumps and valves
Pump operator, foreman	1	- In charge of the operator team	- Pumps and valves
Pump operator	27	- Operation of pumps and valves	- Pumps and valves
Cleaner, foreman	3	- In charge of cleaning groups	
Cleaner	13	- Cleaning	
Cleaner (gates)	11	- Cleaning gates	
Chief of maintenance section	1	- Management - Work planning	Pump technologyManagement
Electrician	4	 Repairing of electrical installations and motors 	- Electrical theory and repairs
Assistant electrician	2	- Assisting the elec- tricians	
TOTAL	71		

WATER TREATMENT DEPARTMENT

POSITION	NR	SCOPE OF ACTIVITIES	SKILLS REQUIRED
Chief of department	1	- In overall charge of department	- Electric. applied to water treatment pro- cedure
Mason	2	- Masonry	- Masonry
Painter	1	- Painting work	- Types and preparati- on of paints
Fitter	1	- Welding, turning and repairs	- Mechanical skills
Assistant fitter	1	- Assisting the fitter	- Mechanical skills
Assistant electrician	1	- Assisting the chief of pumping section in	- Electrical repairs
		electrical jobs	
Lubricator	1	- Lubrications	- on-the-job
Chief of treatment section	1	- In charge of water treatment, stock and purchases	- Water treatment technology
Water treatment operator	5	- Water quality control - Use of chemicals - Record keeping - Providing information	- (Simonazzi training programme)- Water quality control methods
Assistant operator	10	- Assisting operators	_ H _ 1
Chief of pumping sect.	1	- In charge of pump operations and work- shop	 (Simonazzi training programme)
Pump operator	5	 Pump operations Water level control Pumping regulations Simple electrical jobs Record keeping 	
Assist. pump operator	8	- Assisting operators	_ # **
TOTAL	38		

MOTOR VEHICLE DEPARTMENT

POSITION	NR	SCOPE OF ACTIVITIES	SKILLS REQUIRED
Chief of department	1	 In overall charge of workshop and transport Counterpart to the foreman/trainer/Plancenter 	 Transport management Repair techniques, including electr. and hydraulics
.Motor vehicle mechanic	3	- Maintenance and repairs of motor vehicle	- Repair techniques, including electr. and hydraulics
Assist. motor vehicle mechanic	9	- Assisting mechanics	- " -
Chief of transport section	1	 Organizing transport Supervising repairs and maintenance Counterpart to the foreman/trainer/Plan- center 	 Transport management Repair techniques, including electr. and hydraulics
Drivers	10	 Driving trucks, pick- ups and other vehic- les Daily maintenance 	- Driving techniques - Logbook keeping
TOTAL	24		

NETWORK DEPARTMENT

POSITION	NR	SCOPE OF ACTIVITIES	SKILLS REQUIRED
Chief of department	1	- Supervision, planning - Construction, main- tenance	- Managerial skills - Technical skills
	,	- Counterpart to the Construction Super- visor/Plancenter	
Carpenter	3	- Construction work - Furniture making	- Carpentry
Mason	4	- Masonry	
Painter	2	- Painting works	- Types and prepa- ration of paints
Chief of network main- tenance section	1	In charge of repairs and installationsCounterpart to the Construction Super- visor/Plancenter	Managerial skillsInstallat.,repairsDetection methods
Plumber, foreman	1	- In charge of the plumbing team	Network materialsValves
Plumber	8	- Repairs and instal- lations	- Repair methods
Assistant plumber	16	- Assisting plumbers	
Chief of main line maintenance section	1	- In charge of repairs and maintenance - Leakage detection	Managerial skillsRepair methods,including welding
Plumber	1	- Repairs and mainte- nance	- Repair methods, including welding
Assistant plumber	14	- Assisting the plumber	
TOTAL	52		

DRINKING WATER MAINTENANCE DEPARTMENT

		WAILK MAINIBHANCE DEFAR.	
POSITION	NR	SCOPE OF ACTIVITIES	SKILLS REQUIRED
Chief of department	1	In overall charge of departmentCounterpart to the foreman/trainer/Plan- center	Applied electricityManagement
Fitter	3	Filing, welding, fitting	 Mechanical skills, including threads
Assistant fitter	2	- Assisting fitters	_ m _
Turner	1	- Turning, welding, fitting	- Turning, welding, fitting
Electrician	2	- Repairs of elec- trical motors and installations	 Electrical work planning Reading drawings and circuits Repair methods
Assistant electrician	1	- Assisting electri- cians	_ H _
Pump mechanic	2	- Repairing and servi- cing pumps and valves	Pump technologyPump/motor connect.Valves and functionsRepair methods
Assist. pump mechanic	2	- Assisting mechanics	- " -
Water meter mechanic	2	 Testing and repairing water meters 	Types of wat. metersFunctions and repair methods
. Assistant water meter mechanic	1		
Chief of operation section	1	- In charge of pump operations	- Managerial skills - Fault-finding methods
Pump operator	8	Pump operationsWater level control and pump regulationRecording	- Fault-finding methods
FOTAL	26		

	POSITION	NR	SCOPE OF ACTIVITIES	skills required
+	Chief of department	1	 Supervising and organizing Labour laws Planning Evaluation of employees Counterpart to the training officer/PC 	 Personnel management and labour relations Engineer. economics Basics in inform. technology
	Officer in charge of occupational safety and sanitary functions	1	 Planning and implementing job safety and first aid activities Providing information on safe work methods and sanitary func. 	- Job security
' '	Officer in charge of social services and protocol	1	Taking care of visitors and their needsArranging for meetingsOther services	
	Chief of personnel section	1	 Office management Keeping records and files Making payment lists, contracts and schedules 	Personnel management and labour relationsBasics in inform. technology
1	Officer in charge of classifications and norms	1	 Wages scales and ratings Working conditions and their evaluations, norms and statistics 	
4	Typist	2	- Typing	
	Chief of training section	1	 Office management Development of technical and cultural skills and interests of employees Manpower planning and training Counterpart to the Training Officer/PC 	- Manpower training and development
4	Teachers	3	 Lecturing on general subjects, including reading, writing and other general subj. 	- Adult training peda- gogy
*	TOTAL	11		

ACCOUNTS DEPARTMENT

POSITION		NR	SCOPE OF ACTIVITIES	SKILLS REQUIRED
Chief of	department	1	 Supervising and organizing department activities Economic planning Inspection of accounts Assisting general director in administrative functions 	Eng. economicsBasics in inform. technology
Chief of Section	Payments	ļ	- Supervision and control	- Accounts management
Cashier		4	- Receiving payments - Keeping files	
Assistant	cashier	1	- Assisting in office routines	
Chief of Section	Accounts	1	- Supervision and control - Classification of documents - Preparation of accounts - Economic planning	 Accounts management Basics in inform. technology
Clerk		2	- Typing - Office routines	- Typing
	Supply Sect.	1	- Office management - Planning - Supervision of stores	Stores managementBasics in inform.technology
Clerk		1	- Assisting the chief	- " -
.purchases	n charge of , custom dec- and fuels	1	Ordering spares, materials and toolsTaking care of customs declarations	
Storekeep	er	1	 Receiving and distributing supplies, storement tories, store management Counterpart to the foreman/trainer/Plan- 	
	. storekeeper	5	<pre>center - Assisting in store activities - Distribution of fuels</pre>	
TOTAL		19		

CONSUMER SERVICES DEPARTMENT

POSITION	NR	SCOPE OF ACTIVITIES	SKILLS REQUIRED
Chief of department	1	 Supervising and orga- nizing department activities Planning, statistics 	ManagementBasics in inform.technology
Clerk	3	- Consumers' contracts - Charts and forms - Providing information for consumers	- Typing and filing - Consumer service
Clerk		 Making bills and receiving payments Receiving consumers' requests and sending them to Wastewater Department 	 General knowledge on functions & lay-out of wastewater system
Plumber	1	Providing vesselswith waterRecording	- Simple leakage repairs
Assistant plumber	3	- Assisting the plumber	_ " _
Plumber	2	- Changing water meters - Simple repairs - Recording	 Installation, structure & functions of water meters, fault finding and repairs
Assistant plumber	2	- Assisting the plum- bers	- " -
Chief of Meter Reading Section	1	 Supervision and plan- ning Inspection of records Water meter reading 	ManagementBasics in inform.technology
Water meter reader	7	 Reading and recording meters Observing and reporting faulty meters 	Reading different kinds of wat. metersTypical faults in water meters
. Chief of Billing Section	1	- Office management	Material skillsMaking statisticsBasics in inform. technology
Senior clerk	1	Inspection of billsStatistics, office routines	Making statisticsBasics in inform.technology
Clerk	6	- Preparation of bills - Typing, keeping files	- Office work
TOTAL	30		

PERSONNEL IN SERVICE OF PLANCENTER PROJECT

On the recommendation of the project the following most important recruitment we been made:

POSITION	NR	SCOPE OF ACTIVITIES	SKILLS REQUIRED
Draftsman	1	- Making drawings and maps	 Water engineering drawing; maintenance and documentation
Secretary	1	- Recording; filing; translating	- Computer appli- cations
Surveyor	2	- In charge of surveyor team	Leakage detection methodsMapping
Ass. Surveyor	2	- Leakage detection - Mapping	_ " _
Planning Technician	1	- Technical and physi- cal planning	 Water supply and was tewater engineering Project planning and Management Basics in Inform. Technology
Plumber Technician	1	 Water meter investigations, public tap investigations Assistance in planning and field studies 	PlumbingWater metersManagement and reporting
Electrician-foreman	1	- In charge of surveyor and investigation groups	Electrical mattersManagement and re- porting
Excavator Operator	1	- Operating excavator	- Maintenance - Operation
LATO	10		

PERSONNEL IN SERVICE OF THE SUPERVISION UNIT

POSITION	и	R	SCOPE OF ACTIVITIES	SKILLS REQUIRED
Civil Engineer		2	- Supervision of pro- jects	Water and wastewater engineeringProject planning and supervision
Eng. Technicia	in :	3	- Technical planning - Ass. in supervision	- Project planning and supervision
Surveyor		2	- In charge of surveys	- Surveing and map- ping - Drawing and filing
Adm. Technicia	an	1	- Office works - Correspondence - Accounting	- Office management - Accounts management
Draftsman		1	- Drawings and maps	- Filing, equipment handling
Clerk		1	- Office routines - Typing	- Computer applicati- ons - Secretary skills

Course outlines

ALTERNATIVE 1

COURSE NAME: English

Emodrag E.E. State Company

20 participants

COURSE OUTLINES: see the five following pages

TOTAL COSTS: 4000 US\$

ALTERNATIVE 2

COURSE NAME: Basic English

Beira Water Supply Project with Aguas da Beira

Duration 21 weeks (150 hours), 20 participants in two groups

OBJECTIVES:

- To be able to speak, read, write and understand English on a basic level.
- To know the basic grammar of the English language

COURSE OUTLINES

CONTENT TOPIC Diagnostic test - Aims and objectives of English language 1. Introduction - Use of English worldwide 2. Grammar - The alphabet - The indefinite and definite Articles - Plural of nouns - The of-construction - Comparison of adjectives - Numerals - Personal pronouns - Possessive pronouns - Demonstrative pronouns - Interrogative pronouns - Indefinite pronouns - Irregular verbs - All tenses - Conjunctions

- Prepositions

3. Final test

TEACHING METHODS:

- Lectures, home works, exercises, audio-visual methods

COSTS:

TOTAL 6000 US\$

PROGRAMA DE INGLÉS

- 1. Ao elaborar o presente programa tenho em conta o ambiente em que vou dirigir o ensino desta língua, a natureza dos alunos, e as necessidades futuras da empresa: Comunicação e trabalho.
- 2. O programa está dividido em duas partes:
 - I Inglês geral: 4 níveis
 - II Inglês no trabalho: Prática comercial e correspondência nível único.
- 3. A primeira parte (Inglês geral) está dividida em 4 níveis. Sendo o primeiro mais longo do que os restantes. Com a seguinte distribuição:
 - 1. Nível : 6 meses 60 lições 34 teóricas + 20 práticas + 6 avaliações
 - 2. Nível : 3 meses 36 lições 18 teóricas + 10 práticas + 8 avaliações.
 - 3. Nível : 3 meses 36 lições 18 teóricas + 10 práticas + 8 avaliações.
 - 4. Nível : 3 meses 36 lições 18 teóricas + 10 práticas + 8 avaliações
 - 5. Nível : 4 meses 48 lições 18 teóricas + 22 práticas + 8 avaliações

Na 1. fase:

1. Nível : De 12/09/90 a 20/02/90

2. Nivel: De 05/09/90 a 05/12/90

3. Nível : De 05/09/90 a 05/12/90

4. Nível: a 19/10/90

5. Nível : Sem alunos ainda.

Nas fases seguintes a contagem será semelhante conforme a distribuição de tempo.

- 4. Para o presente programa sustento-me nos seguintes princípios:
 - 1. Vamos ensinar os alunos a <u>falarem inglês</u> mas não a falarem <u>do inglês</u>.

 Para isto terá que haver uma sessão de prática para cada lição. É por isso que tenho que contar com aulas de prática na distribuição do tempo e que o 1. nível seja mais longo por causa de adaptação.

2. Muitas vezes os alunos não falam: primeiro porque não têm nada que falar, segundo porque são acanhados.

Para isto temos que proporcionar aos alunos temas escolhidos para a oralidade orientada os quais eles expoem oralmente diante da turma constituindo assim pequenos discursos que são índices do grau da prática oral do aluno.

- 1. Nível deverá conseguir exposições de 5 minutos
- 2. Nível " " 10 "
- 3. Nível " " 15 "
- 4. Nível " " 20 30 minutos
- 5. Nivel " " 30 45 "
- 5. Os níveis a que me refiro distinguem-se com os seus objectivos específicos:
 - I Nível Considera-se que neste nível o aluno não tem nenhuma base de conhecimento da língua.

Aqui, pela primeira vez, deve aprender vocabulário (eixo paradigmático), construção de frases (eixo sintagmático), entoação sensibilidade...

- A) Deve saber a seguinte matéria da estrutura gramatical:
 - Artigos definidos e indefinidos (the, a, an)
 - Pronomes pessoais sujeitos (I, you, he, she, it, we, you, they)
 - Adjectivos possessivos (my, your, his. her, its, our, their)
 - Pronomes pessoais complementos (me, you, him, her, it, us, them)
 - Pronomes possessivos/caso possessivo (the teacher's book)
 - Verbos auxiliares: to be, have, can, may, must.

 present tense (todas flexões)
 - Verbos de acção: to go, come, do ...
 - Flexão dos verbos de acção com o auxiliar to do presente tense (negative ...)
 - Passado e futuro
 - Forma progressiva (auxiliar to be + gerúndio)
 - Graus dos adjectivos

B) - Area vocabular

- Posições: on, under, in, here, there, in front, behind, far, near (how far?)

...///...

- Numerais cardinais até 100 (how many)
- Numerais ordinais até 100 (dates)
- Meios de transporte (how do you go home after work?) (how often...?...
- Processo de comunicação: what, how, when, who, with what, how many, which, how far, how often?
- Cores What colour is ...?

Formas e tamanhos (big, small, short, round, triangular)

- how high is this room?
- Textos de apoio: "Follow me to Britain"
- 2. NÍVEL: É um nível de consolidação do 1. nível
 - Deverá alargar o vocabulário
 - Deverá rever a gramática (presente, past, future)
 - Deverá conhecer o condicional

Area Gramatical:

Revisão

Condicional

Leading forms

Pronomes reflexos - Conjugação reflexa.

Área Vocabular:

Unidade 1 - texto "Saturday morning"

Unidade 2 - texto "Frank's last day in prison

Unidade 3 - Laura's old Job?"

Video Cassetes "Follow me to Britain"

- 3. NÍVEL: Este é o nível caracterizado pela procura de maior conversação.
 - Muitas revisões com muita oralidade.

Area Gramatical:

- Revisões
- Present perfect
- Past perfect

Area Vocabular:

Unidade 1 - "A Job for Frank"

Unidade 2 - "The Kidnapping"

Unidade 3 - "The telephone Call"

Unidade 4 - "A million Dollars"

Video - "Follow me to Britain"

- 4. NÍVEL: Neste nível completa-se o inglês geral, portanto, a primeira parte destinada a "Comunicação".
 - O aluno deve estar mais à vontade ao expressar-se em inglês.
 - Deve dominar " A voz passiva e activa";
 - Deve dominar " O discurso directo e indirecto"
 - Inglês e as preposições: Expressões ideomáticas

Area Gramatical:

- Passive and active voice
- Direct and reported (indirect) speech.
- English and prepositions.
- Revisions

Area Vocabular:

Unidade 1 - "Hob Gives his first Im pressions of England"

Unidade 2 - "Olaf and Pedro Discuss their Plans"

Unidade 3 - "Olaf reads another of his Plays"

Unidade 4 - "Mrs Priestley tells a story and Mr. Priestley puts up a hen - house"

Termina a primeira parte do curso.

5. NIVEL: Este nível corresponde A II parte do curso. É inglês especial, cujo objectivo é aplicação no trabalho:

"Actividade comercial e correspondência".

Há uma necessidade de dar ao aluno um conhecimento simples e claro de prática na escrita de carta comerciais.

Area Gramatical:

- Revisões

Area Vocabular: Departments of "Weavewell Woolen Co. Ltd".

- 1. The manager's room
- 2. The general office
- 3. filing
- 4. The office equipment
- 5. The telephone switchboard

- 6. The work of the general office
- 7. Comercial correspondence
- 8. Applications for a job
- 9. Confirming an apposintment
- 10. The sales department
- 11. Correspondence of sales department (1)
- 12. Correspondence of sales department (2)
- 13. Some explanations. Sales promotion
- 14. A circular and the inquiries from it.
- 15. Orders and their execution (correspondence)

Beira, 21 de Setembro de 1990

COURSE NAME: Basic Plumbing and Pipe Fitting
Hidromoc E.E., Beira in cooperation with DNA Training Center
Duration 4 weeks (140 hours), 25 participants in two groups

OBJECTIVES:

- To be similar with tools and materials used in plumbing. To know the importance of maintenance.
- To be able to execute plumber's work

COURSE OUTLINES

TOPIC	CONTENT
- Diagnostic test 1. Introduction	 Objective and content of the course Safety rules, use of safety material and first aid
2. Working tools	- Identification, use and maintenance of tools and equipment
3. Plumbing materials	 Knowledge and identification of different material used in plumbing works
4. Knowledge of tubes fittings	Types of tubes and fittingsCutting, threadingFitting, joining, bending
5. Special plumbing	- Knowledge of different types of fittings Air valves, wash outs Stop clocks, bib clocks, gate valves Float valves Other valves and water meters
6. Maintenance and repair of tubes and other parts	- Connections, tubes - Valves and taps - Flushing system
7. House connections	- Execution of house connections - Installation of taps on different pipes
8. Maps and drawings	- Interpreting maps and technical drawings
9. Installation of small waterpumps	 Fitting and installation of small water pumps
10. Final test	

TEACHING METHODS:

- Lectures, Practical, individual exercises
- Demonstrations

COSTS:

Teaching 6000 USD

TOTAL 6000 USD

COURSE NAME: Adult Training Methodology
Teacher Training College for Adult Education, Beira-Manga
Duration 3 weeks (90 hours), 4 participants

OBJECTIVES:

- To enable the adult educators to use the current psychopedagogy and methods of adult education.
- To enable them to plan and carry out lessons
- To give them basic knowledge of the process of planning and organizing small courses for internal education, to enable them to participate as members of an education team.
- To introduce the processes of diagnostification and evaluation, as well as development of teaching processes.

COURSE OUTLINES

	maintenance
	- Operation
	- Leak detection
	- Repair methods
	- Preventive maintenance
12. Final test	

TEACHING METHODS:

- Use of plumber's workshop of C.F.P./D.N.A.
- Use of practical teaching zones
- Study visits and audio-visual methods

COSTS:

Alimentation 2025 USD Flight Beira-Maputo-Beira 2100 USD Daily allowance 1260 USD Accommodation 789 USD Teaching 1500 USD TOTAL 7674 USD COURSE NAME: Repairs and Maintenance of Pumps and Valves National Directorate of Waters, Training Center Duration 12 weeks, 9 participants in two groups

s

OBJECTIVES:

- To be able to repair and execute maintenance of pump units and valves in water supply and waste water systems
- To know general operation principles

COURSE OUTLINES

TOPIC	CONTENT	
- Diagnostic test		
1. Introduction	Course programmeImportance of maintenance	
2. Pump types and their components	- Identification of pumps - Components of pumps	
 Maintenance and lub- rification of bearings 	- Lubrification - General maintenance of bearings	
4. Fitting up gasket	- Practical fitting	*
5. Alignment	Fitting and testing of electrical motordriven pumpsDemonstration of various types of couplings	and
6. Interpretation of characteristic curves	- Principle - Interpretation	
7. General principles of operation	Starting, stoppingFilling the pump with water	
8. Function and use of accessories	- Manometer, valves, etc.	
9. Valves	- Installation - Reparation	
10. Maintenance training	Preventive and other maintenanceDiesel motor routines	
11 Pinni bank		

11. Final test

TEACHING METHODS:

- Use of pump and motor workshop of C.F:P./D.N.A.
- Different types of centrifuge pumps and motors.
- Study visits, catalogues and audio-visual methods.

COSTS:

Alimentation 2430 USD Flight Beira-Maputo-Beira 1260 USD Daily allowance 1512 USD Accommodation 945 USD Teaching 3030 USD TOTAL 9177 USD

COURSE NAME. Water Supply and Wastewater Engineering National Directorate of Waters, Training Center Duration 12 weeks, 9 participants in two groups

OBJECTIVES:

- To know how the basic principles and most utilized technologies in water supply engineering.
- To be able to superintend the construction and maintenance of water distribution and wastewater system, as well as simple treatment plants.

COURSE OUTLINES

TO	PIC Diagnostic test	CONTENT
1.	Introduction	- Basic concepts and practices
2.	Systems of Water Supply	 Water Intakes Transmission and distribution Pipelines and pipe materials Pumping stations and design Pump types and selection
		- Water Treatment

3. Waste Water Systems

- Sewage network
- Stormwater drainage - Pipelines and pipe materials
- Overflow structures - Pumping stations
- Construction of sewer structures

4. Wastewater Treatment

- Various treatment processes
- Re-use of wastewater
- Pollution control and prevention
- 5. Operation and maintenance
- Centralized and decentralized maintenance
- Preventive maintenance
- Organization and management
- Storekeeping and billing

6. Final test

TEACHING METHODS:

- Exercises, seminars, study visits
 Use of hydraulic and chemical laboratories of C.F.P./D.A.
- Use of films, slides and other audio-visual methods.

COSTS:

Alimentation 2430 USD Flight Beira-Maputo-Beira 1260 USD Daily allowance 1512 USD

Accommodation 945 USD Teaching 3710 USD TOTAL 9857 USD

COURSE NAME: Personnel Management and Labour Relations National Directorate of Waters, Training Center Duration 4 weeks, 2 participants

ם

OBJECTIVES:

- To promote more capacity in personnel management and labor relations
- To incorporate the scientific methods in staffing organization

COURSE OUTLINES

TOPIC	CONTENT
- Diagnostic test	
1. Introduction	- Programme and objective of the course
2. Personnel Policies	- Choose of proper policy - Renumeration - Discipline
3. Staffing Organization	Function of organizationPrincipal and secondary function
4. Manpower Training	- Planning - Organizing - Evaluation
5. Performance Evaluation	- Different methods of evaluation
6. Manpower Planning	- Manpower movement - Promotion - Recruitment
7. Labour Relations	- Nature of Human Resources - Motivation
	CommunicationStaff participation of the company lifePrevention of conflicts

8. Final test

TEACHING METHODS:

- Human resources Manual compiled in C.F.P./D.N.A.
- Lectures, audio-visual methods

COSTS:

Alimentation 180 USD Flight Beira-Maputo-Beira 280 USD Daily allowance 56 USD Accommodation 70 USD Teaching 750 USD TOTAL 1336 USD COURSE NAME: Project Planning and Management (alternative to the overseas course in Lisbon)
National Directorate of Waters, Training Center
Duration 8 weeks, 4 participants

OBJECTIVES:

 To know phases and methods of project planning, preparation and management.

COURSE OUTLINES

	JADE GOIDINES		
тоі	PIC	CONTENT	
- I	Diagnostic test		
1.	Introduction	- Course programme	-
2.	Project preparation and formulation	Target determinationStrategy comparison and choicPreparation activities	;e
3.	Technics of measuring project results	Costs and benefitsEssential measurementsResult reliability	
4.	Project financing	- Different sources - Different types - Risks of financing	e e
5.	Project Organization Structures	ManagementImplementationPlanification	
6.	Project Monitoring and evaluation	Monitoring systemEvaluation	

- Final test

TEACHING METHODS:

- Exercises, seminars, case studies

- Utilization of audio-visual methods and material produced by the World Bank and translated by DNA Training Center.

COSTS:

Alimentation 720 USD Flight Beira-Maputo-Beira 560 USD Daily allowance 224 USD Accommodation 280 USD Teaching 1500 USD TOTAL 3284 USD COURSE NAME: Manpower Training and Development National Directorate of Waters, Training Center Duration 8 weeks, 1 participant

W

OBJECTIVES:

- to be able to analyze and develop manpower skills according to the expectations of manpower planning

COURSE OUTLINES

TOPIC	CONTENT
- Diagnostic test	
1. Introduction	- Objectives of the course and the course programme
2. Skills of personnel	PlanningMeasurement and analysesDevelopment
3. Manpower Training	 Adult education Planning of training activities Course programming Teaching methods Evaluation
4. Systems and techniques of personnel management	OrganizationCommunicationManagement
5. Manpower Planning	- Basic principles - Planning methods
6. Administrative methods and procedures of manpower	- Most important methods and procedures
- Final test	

TEACHING METHODS:

- Manpower manual compiled in DNA Training Center
- Shop talk, audio-visual methods

COSTS:

Alimentation 180 USD Flight Beira-Maputo-Beira 140 USD Daily allowance 56 USD Accommodation 70 USD Teaching 1000 USD TOTAL 1446 USD COURSE NAME: Stores Management National Directorate of Waters, Training Center Duration 6 weeks, 4 participants

OBJECTIVES:

- To provide for staff working in acquisition sector different forms of purchase and administrative organization.
- Purchases and material control. Files, medium costs and control of stocks.

COURSE OUTLINES

TOPIC	CONTENT
- Diagnostic test	
1. Introduction	Course programmeImportance of well organized store
2. Purchase	 Function of purchase What is purchasing? Administrative organization of purchase Different forms of purchase Commercial documents Packaging Control of bills Reception and control of merchandise
3. Store Administration	 Store ordering and accounting Determination of administration level Existence files Control of monthly consume Existence valuation and control Inventory
4. Stores	- Function of store - Store - Localization of store - Decentralization of stores - Principles and methods of storing - Arrangement planning - Methods of references - Equipment of arrangement
- Final test	

TEACHING METHODS:

- Manuals, working files
- Study visits: Hidromoc, Steia, Entreposto

costs:

Alimentation 540 USD Flight Beira-Maputo-Beira 560 USD Daily allowance 168 USD Accommodation 140 USD Teaching 750 USD TOTAL 2158 USD COURSE NAME. Engineering Economics National Directorate of Waters, Training Center Duration 12 weeks, 2 participants

Y

OBJECTIVES:

- To know the fundamental principles and methods of cost analysis of water and wastewater systems.
- To be able to effectuate cost-benefit analyses of water supply projects.

COURSE OUTLINES

TOPIC	CONTENT
- Diagnostic test	
1. Introduction	- Course programme and objectives of the course.
2. Basic conceptions	- Terminology and basic principles
3. Costs of investment	Costs of implementationCosts of constructionMaterials and hand work
4. Depreciation	Principle and objectsDetermination of depreciation timeDepreciation systems
5. Operating costs	- Different factors - Direct and indirect costs - Monitoring
6. Cost-benefit analyses	Different methods and basic principlesProfit of projectProfit of operation
7. Financial analyses	Source of fundsBudget of various sectors of CompanyBudget control and monitoring
- Final test	

TEACHING METHODS:

- Exercises, seminars.
- Case studies
- Utilization of audio-visual methods and material produced by the World Bank (translated by DNA Training Center).

COSTS:

Alimentation 540 USD Flight Beira-Maputo-Beira 280 USD Daily allowance 168 USD Accommodation 140 USD Teaching 2 250 USD TOTAL 3378 USD

OVERSEAS TRAINING

LISBON COURSE
6 participants, Duration 5 weeks

z

BLOCK (1) - GENERAL PART (GENERAL COURSE OF 2 WEEKS) 6 Technicians of Aquas da Beira"

- 1 General Management 3 Days
- 2 The Water Production and Distribution 2 Days
- 3 Drainage and Sewage Treatment Systems 2 Days
- 4 Applications in Microcomputing 3 Days

BLOCK (2) - PRACTICAL PROFESSIONAL TRAINING PERIOD

- (3 COURSES WITH A DURATION OF 2 WEEKS)
- 3 Subgroups with 2 technicians, each
- A Planning and Management of Works
- B Impounding, supply, treatment and exploitation
- C Human Resources and Finances

BLOCK (3) - STUDY VISITS (1 WEEK)

6 Technicians - 1 week

The training courses will be held in HIDROPROJECTO's and EPAL's premises.

PRELIMINARY TRAINING COURSES PROGRAM

BLOCK (1) ~ GENERAL PART

1. Organization and Management Systems (3 Days Period)

- 1.1 The Enterprise, the Management and its Environment;
- 1.2 Planning Enterprise aims, strategies definition and the planning process;
- 1.3 Enterprises Organization and Management;
- 1.4 Management Control Process and the Information Systems;
- 1.5 Charging, invoicing and collection of the water bills.

The Water Production and Distribution (2 Days Period)

- 2.1 The historical evolution of the water supply process and the water cycle;
- 2.2 From the impounding to the supply urban and rural environment;
- 2.3 Composition and quality of the water.

3. The Drainage and Sewage Treatment Systems (2 Days Period)

- 3.1 Drainage
- 3.2 Treatment of domestic and industrial wastes

4. Microcomputing (3 Days Period)

- 4.1 Introduction to the data processing and to the microcomputing;
- 4.2 Information, computer and information processing notions;
- 4.3 Microcomputers;
- 4.4 Operational systems;
- 4.5 Software for microcomputers
 (Word processing, computing leaf, data bases, CAD, etc.)

BLOCK (2) - PRACTICAL PROFESSIONAL TRAINING PERIOD (3 COURSES WITH A DURATION OF 2 WEEKS)

A - PLANNING AND MANAGEMENT OF WORKS (2 technicians)

- 1 Activity of equipment maintenance (mechanics, electricity, instrumentation and telecommunications);
- 2 General workshop specialized works and recovery of the network materials;
- 3 Management, checking and repair of counters;
- 4 Car fleet Management and maintenance;
- 5 Distribution systems and its record;
- 6 General network and performance of enlargement works and network replacement;
- 7 Ruptures repair and maintenance of the maneuver parts of the network;
- 8 Studies, designs and planning of works.

B - EXPLOITATION AND SUPPLY (2 Technicians)

- 1 Superficial and ground impounding;
- 2 Pumping systems and pumping central;
- 3 Pumping stations, chlorination posts;
- 4 Treatment plant;
- 5 Quality control (Equipments and Methods);
- 6 Exploitation and supply system;
- 7 Exploitation control (Equipments and Control Processes);

C - HUMAN RESOURCES AND FINANCES (2 Technicians)

- 1 Organization and Management of Human Resources and Social Support;
- 2 Aspects of sanitation, medicine, prevention and safety in work;
- 3 Management and renumeration;
- 4 Technical management of human resources and professional training;
- 5 General and analytic accountancy (budgetary and of exploitation);
- 6 Treasury organization and functioning aspects;
- 7 Management control Analysis; information and control;
- 8 Planning and financial management;
- 9 Provision of the working and investment costs/Charging systems.

BLOCK (3) STUDY VISITS (1 week)

- 1 Visit to the subsystem of Castelo de Bode;
- 2 Visit to the treatment plant of Vale da Pedra;
- 3 Visit to the enterprise premises related with the supply system exploitation (Past and Present);
- 4 Visit to the new interception and sewage treatment system of the city of Lisbon;
- 5 Visit to Municipality systems of water and sanitation;
- 6 Visit to a Projects Enterprise.

COSTS:

Teaching 26 000 US\$
Flights 14 200 US\$
Daily allowance 4 800 US\$
TOTAL 48 000 US\$

COURSE NAME. Ceneral Course in Management Techniques (Foreman Course)

Ä

National Directorate of Waters, Training Center Duration 2 weeks, 25 participants in 3 groups

OBJECTIVES:

- To know general principles of management and apply them into practice.
- To be able to lead the staff by legal, rightfull and skilled way.

COURSE OUTLINES

TOPIC	CONTENT
- Diagnostic test	
1. Introduction	- Course programme and objectives of the course.
2. Basic conceptions	- Terminology and basic principles - Management levels
3. Recruitment principles	- Need of personnel - Job descriptions
4. Job instruction	Company level instructionJob level instructionTotal need of instruction
5. Staff handling	MotivationDelegationOrder givingPolicy aspects
6. Result control	Control the given ordersJob measurementJob evaluation
7. Training	Identification of training needsTraining techniquesEvaluation of the success of training
- Final test	

TEACHING METHODS:

- Pracical exercises, seminars.
- Role plays
- Lessons
- Utilization of audio-visual methods.

COSTS:

Alimentation 1125 USD Flight Beira-Maputo-Beira 3500 USD Daily allowance 350 USD Accommodation 438 USD Teaching 1 125 USD TOTAL 6538 USD

Guidelines for on-the-job training

Training of trainers

ON-THE-JOB TRAINING

1	Aims and Objectives of On-the-job Training
2	Structure of the On-the-job Training Programme
3	The Instruction Methodology for On-the-job Training
4	Selection of the Training Place
5	Measurement of Trainee's Progress
6	Keeping Records
7	The Supervision and Control of On-the-job Training

1. AIMS AND OBJECTIVES OF ON-THE-JOB TRAINING

On-the-job training is provided at the work place, in actual working situations. As for planning and implementation procedures, there are differences as compared with off-the-job training, even though the aims are the same, thus

- (a) to increase productivity by ensuring that employees achieve standards of quality and quantity in the shortest possible time;
- (b) to ensure that plant and equipment is properly, safely and economically used;
- (c) to make best use of raw materials and thereby avoid waste;
- (d) to enable workers to achieve optimum earnings as quickly as possible;
- (e) to help reduce labour turn-over by encouraging workers to develop their skills quickly.

2. STRUCTURE OF THE ON-THE-JOB TRAINING PROGRAMME

A training programme can be divided into the following parts: Induction and development of skill and acquisition of job knowledge.

(a) Induction training

Induction training represents the first phase of one-the-job training.

When new employees start work in an organization they cannot give of their best until they have become accustomed to their new environment and the general working conditions.

Some of the more important topics which might be included in an induction training syllabus are set out below.

- (i) Safety and accident prevention
- Workshop safety
- Industrial hygiene and preventative health measures
- First aid facilities
- (ii) Fire precautions and alarm procedures

- (iii) Organization, rules procedures and terms and conditions of employment
 - Time keeping
 - Hours of work
 - Pay arrangements
 - Sickness and absence
 - Holiday arrangements
 - Other relevant information
- (b) Identification of the skills and knowledge to be trained

The main part of the on-the-job training is intended to develop the required skills and pass on the knowledge required for the employees to do the job efficiently and safely.

The best way of developing a combination of skills and elements of know-how is to learn and practice each component skills separately until a satisfactory standard is reached. In order to identify required skills, the task and skill analyses are to be made.

The tasks and skills analyses can be carried out by interviewing employees and observing their activities at work places as done in connection with off-the-job training courses.

Another method of preparing the analyses is to make grids, as explained in the chapter "Training of trainers".

A detailed breakdown of the job is required to be sure that nothing is overlooked in the instruction. The analysis/breakdown may include also key points of each step.

Fault analysis

Fault analysis is a means of identifying the faults which can occur in an operation, their cause, remedy and prevention. It is an extension of task analysis and helps to reduce the amount of scrap, loss of production time and risk of damage to plant and material.

Extract from fault analysis:
Manufacture plate for support bracket

Name	Cause	Effect	Action	Preventation
Undersize hole	 Incorrect drill selected Worn drill 	Component cannot be assembled	Change drill, Re-drill to correct size	Check size of drill before fitting
Oversize hole	- Incorrect drill selected - Blunt drill	Component scrapped	Complete scrap record Change drill	

The above analyses will then constitute the basis for the curriculum and instructor's outline.

3. THE INSTRUCTION METHODOLOGY FOR ON-THE-JOB TRAINING

The general pattern of instruction of a skill is a four-step process:

(a) Prepare the employee

Find out what he already knows about the job and stimulate his interests in it.

(b) Present the operation

Go through the operation carefully using drawings, diagrams, job sheets, instruction sheets, etc. for reference.

Particularly with longer or more complex jobs it is better to prepare and use the so called instruction sheets, setting out in the correct order of stages of instruction with the necessary details of how the task should be done. A sample instruction sheet is shown in App. A.

Tell the trainee exactly what each stage is and how to do it by way of demonstration. Note the key points and precautions which must be taken to protect the work, equipment or the operator himself.

(c) Try out employee's performance

Let him perform the operation. Have him explain the steps and key points to you.

Ask him questions about the steps to be absolutely sure that the understands them thoroughly.

(d) Follow-up

Put the trainee on his own. Let him do the job by himself. Observe his performance regularly to be sure he is following the correct methods.

The trainer must keep a close watch on the progress of the trainee as training continues. Any difficulty the trainee is having should be instantly brought to the attention of the trainer.

4. SELECTION OF THE TRAINING PLACE

In general the on-the-job training takes place at the trainee's workplace.

He will learn to use tools and equipment which he has to use in actual operations as for training. He is able to develop positive contacts with his fellow employees and supervisory staff already during the training time, both of which greatly contribute to the job success and motivation of the employee.

There are, however, some points to be taken into account.

First, the tools and equipment as stated in the training programme must be available.

Second, the skills of the instructors must be up-todate.

In the negative case the training should be implemented in other facilities where the above-mentioned requirements are met. The training or a part of it may take place even in an overseas organization.

5. MEASUREMENT OF TRAINEE'S PROGRESS

Measurement of trainee's progress is the responsibility of the trainer. Well-planned tests will give him this essential information. Tests vary from a casual question asked of a trainee to a request for a detailed explanation of a complicated operation or a comprehensive written examination, or job performance.

- (a) Performance tests measure the ability to perform the specific tasks at a skill level commensurate with the stage of training. This type of practical tests are meaningful to the learner and give the trainer concrete evidence of skill development. A sample practical test is shown in App. B.
- (b) Verbal tests can vary in difficulty. They provide a quick check on the spot on basic understanding of the trainee.
- (c) Written tests measure the job knowledge related to the operation of the skill. There is a wide choice of written tests, of which objective tests are commonly used

6. KEEPING RECORDS

The supervisor or the trainer needs progress records, or job logs, so that he can check the development of the trainee and be able to remember the state of development that each has reached.

The following forms will usually take care of the essentials of record keeping:

(a) The weekly job log

The weekly job log will be kept by the trainee. A sample form is shown in App. C. It is laid out to allow one line for each work assignment or subject area during the day, including off-the-job training. The hours for each day can be totalled and the form can then be used as a timekeeping card.

Each category or work is assigned a symbol to make the recording easy. Absences are also symbolized.

As stated, the trainee keeps a daily record of him activities, showing symbols and the average amount of time spent in each activity during the day. At the end of the week, he turns the record over to the instructor to be entered in the monthly job log.

(b) The monthly job log

The monthly job log will be kept by the trainer. A sample form in App. D. Each subject area is listed in the left-hand column by name and by symbol. The next column is for the instructor's estimate of the total number of hours required for each area. The columns have an upper and lower section for each subject area. The number of hours spent in each activity should be noted in the upper section and the accumulated total in the lower section.

(c) The target times record

It has often been found advantageous to give the target times to trainees and to allow them to record their own progress. This gives immediate knowledge of results to the trainees and encourages them to improve performance. The work sheet is used to record trainees' target times.

(d) The personal record

The trainee personal record contains at least the following information:

- name
- age
- commenced training
- training programme to be followed
- name of trainer
- completed training
- trainer's assessment
- supervisor's assessment on trainee's performance at work.

7. THE SUPERVISION AND CONTROL OF ON-THE-JOB TRAINING

The training of employees at the workplaces must be adequately supervised. A responsible chief should be nominated to exercise control for training so as to ensure that sound policies and practices are developed and applied. In this way the aims of the on-the-job training are most likely to be achieved.

TRAINING OF TRAINERS

1	Basic	Qualifications	of	a	Successful	Trainer

- 2 The Instructional Skills Required
- 3 Learning the Instructional Skills

1. BASIC QUALIFICATIONS OF A SUCCESSFUL TRAINER

The acquisition of knowledge and development of skills by employees under training will depend largely on the quality of the instruction given. Whether an instructor is a supervisor, a foreman or a fellow employee, he must be highly skilled in the processes he is to teach.

It is not, however, enough. He may know how to do a job well, but he may not be able to instruct others how to do that job in which he is so highly skilled. Doing is one thing. Passing know-how along to another person is something else. The correct techniques of instruction are required. It is, however, possible for the skilled man to learn the techniques of successful instruction.

In addition to the technical skills, some basic qualities are required to do a successful trainer:

- (a) He must know exactly what he is trying to do and must be able to persevere in doing it.
- (b) He must be enthusiastic. It is infectious.
- (c) He has to have the positive attitude towards the organization and the trainee.
- (d) He must be willing to learn the proper techniques of instruction.

2. THE INSTRUCTIONAL SKILLS REQUIRED

(a) Elaboration of curriculum

A curriculum is a list of topics forming the foundation upon which a programme of instruction is built.

The sequence leading to specification of the curriculum consists of identification of a need to train personnel to perform a specific function. The production of a job description, if not up to date, will be necessary to define the end point of training, and the input level of the programme will have to be specified.

(b) The preparation of task and skill analyses

The task and skill analysis will identify the operational or performance components of the job and relate these items to the knowledge and skills required to perform the job.

Once the task analysis grid has been developed, it is possible to identify those items of a potential curriculum and place them into categories. In this connection it is to be kept in mind that it is far better to teach a little thoroughly than attempt a lot superficially.

The skill analysis will show the employees who are in need of skills appearing in the task analysis.

The development of the task and skill analyses is best performed in consultation with the responsible chief of the personnel. In this way the credibility of the curriculum is established and the trainer bears the realistic responsibility of providing the best possible instruction.

A format for task analysis as developed in the case of "Small engine repairman" might begin as follows:

To Do	Clean cylinder head cooling fins	Adjust points	Decarbonize cylinder head	Change oil	Clean spark plugs
w i					
To Know					
Use hand tools	x	x	x	x	×
Types of Lubricants				x	
Voltage measurem ent		X			
Fastening systems			x		x
Identification of Engine Parts	x	x	x		х
Safe work habits	x	x	x	x	×

A sample skill analysis is shown in App. E.

A curriculum for "Small engine repairman" would include the topics:

- use of handtools
- types of lubricants
- voltage measurement
- fastening systems
- identification of engine parts
- safe work habits etc.

(It is not necessary to follow this order.)

(c) Preparation of a course outline/syllabus

The course outline is the essential document in the design of effective instruction.

The contents of the topics have been detailed, teaching strategies/practical operations have been specified and time estimates made. A sample course outline is shown in App. F.

(d) Various methods of instruction

The selection of a method depends on the type of training used. Training may take place "on-the-job" in the production area or "off-the-job" in a separate area away from the production environment, or in institute.

- shop talk
- demonstration
- project method learning by doing
- instructional visits
- applied exercises
- instruction pattern for workplace training

are typical methods for on-the-job training, whereas

- lesson
- lecture
- participative learning
- assignment and discussion
- case study group discussions
- teaching pattern for classroom training

are more appropriate for off-the-job training.

(e) Use of training aids and materials

The selection of training materials and aids depends also on the type of training used.

- chalkboard
- manufacturer's manuals
- samples and displays
- mock-ups and models
- drawings, diagrams, job sheets, instruction sheets and records

are most used in on-the-job training.

In addition to the above

- overhead projector
- slide projector
- flip charts

are applied mostly to off-the-job training situations.

(f) Measuring trainees progress

The trainer must always know his trainees' stage of development. He must be able to determine whether they are on the right track and how far they have travelled on it. A well-planned series of tests to accompany his instruction will give him this information.

Tests fall into three categories:

- performance tests
- verbal tests
- written tests

of which performance tests are most important, particularly on employees' level.

Tests are an important part of the teaching process. Every test should be graded and returned. Each test does two jobs. It tests both the knowledge and skills of the trainee and the effectiveness of the trainer.

3. LEARNING THE INSTRUCTIONAL SKILLS

Trainer candidates should be selected, as mentioned earlier, form among supervisors, foremen or experienced employees who are technically highly skilled and have basic qualities required to do a successful trainer.

They have not, however, any training in instructional skills. Therefore instructional methods course should be launched soonest. Particularly on-the-job training, that will be a continuous process in the future, will need trained instructors most of which will teach on part-time basis.

The course would be composed of the following parts:

The first part - 2 weeks of duration

The curriculum of the first part would consist of the methodology and exercises as meant for on-the-job training.

- The second part - also 2 weeks of duration

The curriculum would mainly concentrate on off-the-training methodology and related exercises.

The last part of the course will be as supervised teaching practice of which 2 weeks would be implemented in normal working conditions (a part-time on-the-job trainer) in AdB organization. Another 2 weeks would take place in DNA Training Centre in Maputo as an off-the-job trainer.

The total duration of the course will then amount to 8 weeks.

Between the first and second part should be an about 3 months' break during which the participants will prepare training materials in the course of their normal duties.

The durations above are estimated and are subject to changes depending on the abilities and backgrounds of the trainer candidates.

TURNING OF A PROFILE

Instruction Sheet
TURNING

Order of instructions

- 1 Chucking the workpiece
- 2 Clamping the lathe tool
- 3 Turning with profile tool
- 4 Parting off

The instructor indicates dimensions and tolerance

Tool material: high speed steel

- hold a white paper under

- keep the template horizontally

1 Chucking the workpiece

When turning with a profile tool it is important that the workpiece is chucked as rigidly as possible

2 Clamping the lathe tool

- a Checking
 - see that the lathe tool has the profile indicated in the drawing
 - check that the tool is sharp
- b Setting the lathe tool
 - set the tool to centre height
 - -- tighten securely but do not damage the threads
- adjust the tool laterally so that the correct profile is obtained on the workpiece
- tighten the tool holder firmly

3 Turning with profile tool

- a Setting the spindle speed
- . use a cutting speed of about 8 m/min

b Turning

- feed by hand with the cross slide
- let the tool cut out between each feeding in
- lubricate adequately
- c Checking the profile
 - wipe the workpiece clean
 - use a template

4 Parting off

 catch the workpiece so that damage to the workpiece and the machine are avoided

APPENDIX B.

Item	Operations	Basic	Factor	Marks	-
		Mark (0.1.2)	(1.2.3)	0btained	Possible
1	Disconnect the leads and remove the plugs;		1		2

APPENDIX F.

COURSE: AREAL TECHNICIAN, GRADE III

Objective: It is intended to meet the needs of Areal Techni

cians enganged on the preventive maintenance and trouble shooting as well as community work in villages. The participants are preparing for the award of the National Grade III Trade Certificate.

Duration: 45 hours

Amount of

Participants: 22

Number of

Syllabus:

Courses: 2

In line with the task- and skill analysis

Implementing

Establishment: Water Resources Institute and organizations

Cost estimate:

SY	LLABUS; AREAL TE	CHNICIAN, GRADE III	<u> </u>	-
NO	Topic	Content	Teaching Strategy	Time/ hrs
1.	Introduction	- Shallow wells as low cost technology	Lecture, discussions	2
2.	Identification and Operation of hand pump	Material and namesof pump componentsWorking principles	- Demonstrations - Dismantling and assembling of pumps	12
3.	Follow-up	- Follow-up activities - Follow-up forms - Filling in procedure	- Lecture/ demonstrations - Filling in exercises	3
4.	Community work	- Formation and duties of Village water community	- Lecture/ demonstrations - Discussions	2
5.	Pump Replacement	- Requirement of pump replacement - Types of pumps	- Lecture/ demonstrations	7
6.	Hand pump maintenance	- Preventive maintenance - Trouble shooting and remedy actions	- Lecture/ demonstrations - Practical excercises - Group discussions	13
7.	Reporting	- Monthly reporting a) maintenance b) water committee	- Demonstrations - Group work	3
8.	Final test and certification		- Summative test	3

On-the-job training planning, reporting and evaluation

Beira Water Supply Project Plancenter LTD - Aguas da Beira

INSTRUCTIONS TO PLAN AND REPORT COUNTERPART ACTIVITIES

Kalle Rajantie Training Officer

1. Introduction

Counterpart training and other counterpart activities are one of the most important tasks in development cooperation. The expatriate should be able to teach his counterpart to do all operative tasks independently, also after the contract of the expert has been terminated.

Not only the expert teach his counterpart, but also the counterpart should teach the expert especially on local circumstances, norms, standards etc. Expert and counterpart should work always together solving problems together. Only by this way the work of expert will create lasting development, which is one of the main targets of development aid.

Two different form types, first for planning and other for reporting, are being presented in this paper. The aim is, that counterpart activities will be planned and reported monthly by each expert.

2. Planning of counterpart activities

The form for planning of counterpart activities consists of five parts. Names and planning period should be filled up on the first part, on top of the form.

The other four parts are similar with each other. Every part of them is for one main topic (matter) of training. On the left side date(s) and time(s) of training on each topic should be written. There is also space for detailed sub-topics, which indicate the content of the training.

In Annex 1 is presented an empty planning form. The counterparts should fill up their own forms together with consultants, this activity being then also one part of training. Practice in Portuguese and English languages should and could be one part of the every day counterpart training.

Too detailed descriptions of the trained skills are not needed. If it is not possible to indicate exact date and time, it is enough to mention more or less the planned duration of each teaching topic.

The counterpart plan for next month should be presented to the Project Manager and Training Officer on 1st day of every month. The Manager will collect the plans and present to the SUPRA.

3. Counterpart activity report

Main target, but also main problem of reporting is to evaluate the success of the training. Now can be only suggested, that the expert should estimate per every topic a numerical value between 0-5 depending on the learned level or level of understanding or level of communication success of his counterpart.

For this purpose, a special form was developed. An empty version in English is presented in Annex 2. The form looks almost like the planning form. The only major difference is the column "success". There should be marked the success levels of the activities which are listed in the column "realized activities". The listed activities should be the same as mentioned on the planning form.

It is recommended, that the consultant together with counterpart analyses the success of the training giving paralelly feedback. They should discuss if it is necessary to continue the training of some topics or if the counterpart knows already enough.

If date(s) and time(s) couldn't be indicated exactly, it is enough, that at least duration of the training will be reported per each main topic.

The plans should be flexible. If the counterpart didn't learned some topics as planned, the programme should be changed and more time reserved for that topic. This will then be seen in the monthly report.

It is desirable, that the experts discuss with the Training Officer or with the Manager about each monthly report and gives detailed information about the trained skills, if requested for the evaluation purposes. The training will then be evaluated on the basis of report and discussions and if needed, also by supplementary checkings.

The counterpart report should be presented to the Project Manager and Training Officer before 5th day of every month.

4. Training pre-information and evaluation

If the consultant has aim to organize a special instruction course to his staff, he should fill up a form presented in Annex 3 and give the form to the Training Officer as an information of the course. He then, if needed, will participate on the preparation and teaching in the course. The form is also important for filing registering purposes.

The evaluation form presented in Annex 4 is mostly prepared for use of the Training Officer, but is also useful for other consultants giving on-the-job training. The form is especially for practical evaluation of the training. The skills should be distributed to small parts and each part should have some weight so that the whole act will have total weight of 1.0. Then each sub-skill should be evaluated with rate 0-5 and the total success calculated.
