

Research jointly supported by the ESRC and DFID

Measuring pastoralist water security in the Lowlands

A learning seminar on 25 October 2018, ILRI campus, Addis Ababa

Organised by IRC WASH in collaboration with Cranfield University, Oxfam, Friendship Support Association, the International Water Management Institute and partners.

The seminar aims to share innovative research on measuring water security in the Ethiopian lowlands. This draws on the study of emotions by the WEEP project team (Cranfield University, Oxfam, IRC WASH, IWMI and the Friendship Support Association) to ask pastoralists focused questions related to their local context. The seminar seeks to bring together decision makers, researchers and practitioners to provide feedback on the research and identify potential applications and new partnerships.

The lowlands of Ethiopia - in Afar, Somali, and parts of Oromia and SNNP regions - are home to populations with the highest levels of poverty in the country. Levels of safe water access for homes and institutions (schools and health institutions) are the lowest in the country. Pastoralist communities in the lowlands also rely upon water for livestock as much as domestic supplies. Recurrent droughts that are part of a harsh climate, and frequent outbreaks of water related disease frequently trigger emergency responses. The cost of water trucking in these regions is a major drain on national finances and development partners.

Major development initiatives in the region have focused on irrigated agricultural development and settlement of pastoralist communities. The Climate Resilient WASH programme launched at the end of 2017 and expected to start in 2018, seeks to transform the provision of water services in the lowlands. CR-WASH promotes major investments in the utilisation of deep aquifers, multi-village piped water supplies and the professionalization of maintenance and management of water supply schemes for people and livestock. Annual investments in CR-WASH are expected to exceed the total entire current investments in WASH for the whole country.

WEEP

Water-security in Ethiopia and the Emotional response of Pastoralists
ESRC-DFID Development Frontiers

OXFAM

In this context, understanding water security for pastoralists is of critical importance. Current tools in use for measuring progress in WASH are not always well adapted to the Lowland context. The WEEP team will present innovative ideas to measure water security and insecurity based on the study of emotions.

Draft agenda

1000-1030: Registration (at ILRI campus)

1030-1045: Welcome and introductions

1045-1100: Keynote address on CR-WASH (MoWIE, tbc)

1100-1130: Monitoring what matters for pastoralists in lowland water security (Paul Hutchings, Cranfield University and Abinet Kebede, IRC WASH)

1120-1230: Panel discussion (facilitated by Barbara van Koppen, IWMI)

1230- Lunch

Lunch will be provided.

Joining the seminar

Participants from government, development partners, universities and civil society interested in issues of development in the lowlands are invited to participate.

Please contact John Butterworth (butterworth@ircwash.org) with any questions about the seminar, and confirm your participation to Betty (asegid@ircwash.org) by Monday 22 October.
